

## ADULT: SEPSIS AND SEPTIC SHOCK CHART AUDIT

In November of each year, complete 10 chart audits at regional centres and 5 chart audits at non-regional centres.

Facility: \_\_\_\_\_ Date: \_\_\_\_\_ Audit completed by: \_\_\_\_\_

Medical Record Chart Number																														
Desired response: Yes (Y) or Not Applicable (NA)	Y	NA	No	Y	NA	No	Y	NA	No	Y	NA	No	Y	NA	No	Y	NA	No	Y	NA	No	Y	NA	No	Y	NA	No	Y	NA	No
1. Time of initial screen recorded.																														
2. Fluid bolus started within 10 min. of initial assessment.																														
3. Blood samples for laboratory investigation, including blood cultures, obtained within 10 min. of initial screen.																														
4. Diagnosis of sepsis confirmed within 30 min. of initial screen.																														
5. IV antibiotic started within 60 min. of initial screen.																														
6. Lactate rechecked at 180 min. (3-hours) from initial screen.																														
7. Confirmation/disconfirmation of septic shock occurred at 180 min. (3-hours) from time of initial assessment																														
Total number of Y and NA responses only:																														
Formula: $\frac{\text{Total \# of Yes and NA responses}}{\text{Total \# of charts audited} \times 7 \text{ total possible responses}} = \text{_____} \times 100 = \text{_____} \% \text{ rate of meeting the indicator}$																														
Recommendations for improvement:
