

Southern Health-Santé Sud Capacity Management Protocol

Site Specific Plan – Boundary Trails Health Centre (BTHC)

Purpose:

Coordination of patient flow and identification of priority areas of concern related to overcapacity requires active management of overall beds, across all services within a facility. Prioritization (inflows/outflows) considerations, based on degree of risk occurring related to overcapacity, include:

- Patient need;
- Specialized services only available at specific sites;
- Capacity across all service deliver organizations; and/or
- Provider resources including physical space.

Provide a standardized process that supports appropriate response to surges in activity and overcrowding in Emergency Department (ED) and to mitigate barriers to patient flow. The Capacity Management Protocol outlines standard work under conditions moving from "No Safety Risk" (white) to "System Safety Risk Exceeded Available Capacity" (black), see Capacity Management Protocol CLI.4110.PL.030.

Transfers:

- Lower acuity patients flow from higher acuity Emergency Department (ED)/facilities reporting higher occupancy levels to the site closest to the patient's home within their home health region that can meet the patients care needs.
- Transfers to a facility outside a patient's home health region are considered if the patient needs to be moved further away from home within their home region than to the site outside their home region.
- Sites with available beds may not delay or refuse acceptance of patients when safe patient care can be provided at the facility with available capacity.
- Where patients and families have concerns regarding repatriations, transfers or destination decisions, patient flow along with clinical teams and leadership work with the patients to support the transition of care. Provincial tools are available to support teams/staff.

ED Overcrowding Score:

- Regional Sites as indicated by Emergency Department Information System (EDIS)
- Community Acute Sites total patients registered in ED divided by total funded spaces

Legend: The following levels and minimum standards apply to Service Delivery Organization/Health Authorities and Health organizations, their staff, operational, clinical, and medical leadership supporting a provincial response standard to reduce risks and manage system, regional and facility capacity levels. The actions within each level are progressive, building off the other across each level.

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 1 of 22

	Level	ED Overcrowding Score (NEDOCS/CEDOCS/ ED/UC OCCUPANCY	Site Occupancy
0	Level 0 (White) –No Safety Risk - Capacity Available	< 50	Occupancy < 70%;
1	Level 1 (Green) – Low Safety Risk Due to Overcapacity	51 - 100	Occupancy* 71 - 85%;
2	Level 2 (Orange) – Medium Safety Risk Due to Overcapacity	101 - 140	Occupancy 86 - 90%;
3	Level 3 (Red) – High Safety Risk Due to Overcapacity	141 - 180	Occupancy 91 - 100%;
4	Level 4 –(Black) SystemSafetyRisk and Exceed Available Capacity	Greater than 181	Occupancy exceeds 100%

Site Capacity: Baseline Funded Beds – Boundary Trails Health Centre

Unit	ED:	Medicine:	Rehab:	Surgical:	Obstetrical:	Special Care Unit:	Total Beds

See <u>Provincial Dashboard</u> for more detailed information.

Standard Actions:

Facility Units		Date,
		Time,
		Initial
Inpatient Unit Staff – Across All Units	 Daily site rounds to assess patient's readiness for discharge, and identify barriers to discharge. Monitor capacity and identify flow risks. Actively working to maximize occupancy and by pulling ED admissions to inpatient units <u>within 30 minutes</u>. Regularly review Infection, Prevention & Control (IPC) processes and cohorting patients where possible. Bed management – units/sites are actively reporting bed census in Electronic Patient Record (EPR) including beds in operation, bed closures, Alternate Level of Care (ALC) designations, occupancy and patient discharges. Where patients or families have concerns re: transfer/repatriation, work with patient flow, Clinical Resource Nurse (CRN), site manager, director and physicians to problem solve. Coordinate off site transport for follow up appointments, diagnostics, specialty services to optimize efficiency and reduce delay and minimize unnecessary travel. Enter patient transport requests as soon as known, per procedure. Transport Delay: Contact MTCC for status update. 	

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 2 of 22

	Notify housekeeping of discharges promptly.
	Weekly multidisciplinary disposition planning.
	Ensure early consults/referrals (i.e. homecare/social
	work/allied health).
	Daily huddle at 0845/1830. Determine number of
	probable admissions – community, ED, repatriations.
	 Expected date of discharge discussed with patient,
	support/family daily. Updated on Whiteboards each shift.
	Discharge planning starts at admission, with assessment of
	potential barriers to discharge each shift. Aim for
	discharge by 1100. Communication with patient/family to
	ensure transportation arranged in advance.
Level 1	Sites in Level 1 hold admissions in ED to accommodate
	incoming transfers from higher acuity sites reporting a
	higher overcapacity risk.
	 Begin utilization of 'over census' beds where applicable.
	 Consider proactively moving patients where estimated
	remaining length of stay (LOS) is greater than 3 days into
	facilities that regularly have capacity within Southern
	Health-Santé Sud.
	facilities at Level 0 where estimated LOS is greater than 3
	days, ALC and/or low acuity transport is available.
Level 2	Sites in Level 2 or higher with incoming repatriations or
	lower acuity transfer from a site reporting higher capacity
	risk level accommodate by:
	 Hold admissions in ED.
	 Utilize all off census or temporary spaces
	available.
	 Redirecting requests to alternate sites within
	patients' home health region; OR
	 Redirecting request to alternate sites in another
	health region that is reporting lower overcapacity
	risk AND is closer to their home community and
	or Primary Care Provider (PCP).
	 Off service patients to utilize all available spaces.
	Expedite discharges on the unit.
	Ensure nursing handover to unit team completed and
	patient pulled to unit within 30 mins of bed assignment
	for ED patients.
	Escalate capacity concerns for CRN/Charge Nurse.
Level 3	Pending consults, diagnostics and investigations are
	triaged and expedited to account for facility risk.
	 Notify housekeeper directly of discharges: if upable to
	 Notify housekeeper directly of discharges; if unable to reach housekeeper contact housekeeping
	reach housekeeper contact housekeeping
	reach housekeeper contact housekeeping supervisor/manager.
Level 4	reach housekeeper contact housekeeping

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 3 of 22

		 With approval from Regional Acute On-Call, Call in Heavy Work Relief (HWR): nursing, Health Care Aide (HCA) or
		Unit Clerk as required.
	Level 0	Follow Code Orange if applicable.Reference guidance across all units
Unit Specific	Level 1	
(Inpatient Rehab, Obstetrics,	Level 2	Rehab: Reassess applications for off service admission to Rehab Unit.
Surgery)	Level 3	Obstetrics: consider obstetrical diversion.
	Level 4	Obstetrics: implement obstetrical diversion.
ED Staff	Level 0	 Bed management – EDs are actively reporting bed census in Electronic Patient Record (EPR)/EDIS including ED closures, ventilated and transferrable patients in critical care. Communicate admission decisions to unit clerk at time of order. EDIS updated promptly to note patient disposition (i.e. discharge admission location, change in level of service). Where patients or families have concerns re: transfer/repatriation, work with patient flow, CRN, site manager, director and physicians to problem solve. Coordinate off site transport for follow up appointments, diagnostics, specialty services to optimize efficiency and reduce delay and minimize unnecessary travel. Flag ED patients pending reassessment and/or pending admission orders. Continually re-evaluate patient need to occupy stretcher in collaboration with physicians (i.e. move to chair or waiting room). Ensure faxed/phone report is completed when bed available on receiving ward. ED patient is discharged from Admission/Discharge/Transfer (ADT)/EPR and or changed service level 24-7. Transfer to open bed within 30 minutes. Escalate long stay/transfer or discharge barriers to CRN.
	Level 1	Sites in Level 1 hold admissions in ED to accommodate
		incoming transfers from higher acuity sites reporting a higher overcapacity risk.
		Begin utilization of 'off census' beds where applicable.
		Consider proactively moving patients where estimated remaining LOC is greater than 2 days into facilities that
		remaining LOS is greater than 3 days into facilities that
		 regularly have capacity within their own health region. Consider ALC or lower acuity patients transferred to
		facilities at Level 0 where estimated LOS is greater than 3
		days, ALC and/or low acuity transport is available.
		 Consults to be completed within 2 hours.

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 4 of 22

· · · · · · · · · · · · · · · · · · ·		
	Level 2	Sites in Level 2 or higher with incoming repatriations or lower
		acuity transfer from a site reporting higher capacity risk level
		accommodate by:
		Hold admissions in ED.
		Utilize all over census or temporary spaces available.
		Redirecting requests to alternate sites within patient's
		home health region; OR
		Redirecting request to alternate sites in another health
		region that is reporting lower overcapacity risk AND is
		closer to their home community/PCP.
		Expedite discharge of patients in ED.
		 Actively coordinate flow of patients through the ED (i.e.
		lab result review).
		 Notify CRN/Charge unit manager as needed.
		 Consider gaining approval for providing alternate methods
		of transport for patients awaiting transfer out of facility.
		 ED lab and imaging prioritized over outpatients unless
		discharge related.
	Level 3	 Pending consults, diagnostics and investigations are
		triaged and expedited to account for facility risk.
		For sentinel events related to clinical acuity, consider
		calling a code blue for additional supports.
		Reassess Capacity Safety Risk status every 90 minutes.
		Consider implementing Nurse Managed Care.
	Level 4	All available spaces are being used and additional bed
		spaces are made available.
		Call in HWR nursing, HCA or Unit Clerk as required with
		manager approval.
		Implement Nurse Managed Care.
		Follow Code Orange if applicable.
	Level 0	Daily site rounding to proactively identify barriers to
		discharge and set/monitor expected date of discharge
		with manager and physician.
		Monitor capacity and identify flow risks.
		 Monitor patients' length of stay and hold regular case
		planning/rounds to ensure monitoring and discharge
		planning occur. Review LOS greater than 14 days to ensure
		care plans up to date with stated EDDs.
		• ED and direct admissions of lower acuity are safely
		directed to community, primary care or lower acuity
		facility (including Transitional Care Unit (TCU)), active
CRN/Charge Nurse		presence of home care case coordinators in ED to
 Across all units 		facilitate discharge to community.
		 Interdisciplinary teams actively collaborate with
		community partners on discharge planning and solutions
		for patients deemed to be ALC.
		 Bed management – units/sites are actively reporting bed
		census in EPR including beds in operation, bed closures,
		ALC designations, occupancy and patient discharges.
	1	

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 5 of 22

	Sites with available beds may not delay or refuse
	acceptance of patients when safe patient care can be
	provided at a facility with capacity.
	Where patients or families have concerns re:
	transfer/repatriation, work with patient flow, site
	manager, director and physicians to problem solve.
	Attend site and regional daily huddles as required.
	Daily review of inter-regional repatriation requests/out of
	region and out of province/country.
	Pull patients from ED within 30 mins and provide times
	beds will be ready.
	Follow <u>CLI.4110.PL.008</u> Interim Placement for Patients
	Waiting Personal Care Home Placement.
Level 1	Escalate barriers to timely admission, discharge, transfer
	to unit manager promptly.
Level 2	Off service patients to utilize all available spaces.
	Review closed/blocked beds for capacity to reopen. Assess
	required resources to support.
	Consult with IPC to consider reassignment of isolation
	patients to private rooms on another unit or
	cohorting/discontinuing isolation where appropriate.
	 With manager and hospitalist, review all patients to
	identify possible discharges that could be safely
	expedited.
	 Direct staff to discharge patients that do not require
	nursing intervention to await pick up in public spaces (i.e.
	main lobby, etc.).
	 Direct staff to move confirmed discharged patients that
	require nursing intervention to common areas on unit for
	care until discharged (i.e. hallway, lounge, etc.).
	 Determine availability at Acute Community sites, TCU, and
	Personal Care Home (PCH).
	 Contact Regional Emergency Response Services (ERS) for
	transfer delays.
	 Evaluate staffing resources required, communicate with
	manager/on call as needed.
Level 3	
Levers	 Patients are admitted into available beds beyond existing admission criteria as long as their clinical needs can be
	met.
	from other units within site/storage.
	 Assess staffing resources required. Assess available (multiple staff to most write people within the
	available/qualified staff to meet unit needs within the
	facility.
	 Evening, Night, Weekends – Regional On-Call.
	Call in HWR nursing, HCA or Unit clerk with manager/on
	call approval.
Level 4	 All available spaces are being used and additional bed

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 6 of 22

		Utilize contingency spaces (i.e. hallways/family room until unit hade can be error and)	
		unit beds can be arranged).	
		Follow Code Orange Protocol if applicable.	
	Level 0	 Bed management – EDs are actively reporting bed census in EBP/EDIS including ED closures and ventilated and 	
		in ERP/EDIS including ED closures and ventilated and	
		transferrable patients in critical care	
		Review EDIS board to prioritize activity at shift change and as needed. Posiciew Investigation required or actions	
		as needed. Review: Investigation required or actions,	
		ordered needed, treatments pending, reassessment	
		required, consults pending, discharges, reassess to be admitted, triage concerns/quick actions.	
		Report out ED Capacity Level and review ED admissions at shift huddle and facility huddle at 0845 (1820	
		shift huddle and facility huddle at 0845/1830.	
ED CRN		 Flag ED patients pending reassessment and/or pending admission orders. 	
		• Continually re-evaluate patient need to occupy stretcher in collaboration with physicians (i.e. move to chair or	
		waiting room).	
		 Ensure faxed/phone report is completed to receiving unit. 	
		 Attend site and regional daily huddles as required. 	
		 Beds assigned prior to 1000h and 1500hrs daily (open and 	
		known discharges).	
	Level 1		
		Expedite discharge of patients in ED in collaboration with	
	Leverz	ED physicians.	
		 Actively coordinate flow of patients through the ED (i.e. 	
		lab result review).	
		 Escalate to manager or Regional Acute On-Call for 	
		problem solving/broader site awareness.	
		 Assess staffing needs to support ED acuity/volume. 	
		 Review board with ED physician to consider decanting 	
		CTAS 4/5 to Primary Care Clinic.	
		Reassess Capacity Safety Risk status every 90 minutes.	
		 Notify ED manager of increase in capacity level. 	
	Level 3	For sentinel events related to clinical acuity, consider	
		calling a code blue for additional supports.	
		Consider transferring patients from ED directly to another	
		site if appropriate (lower acuity patients could be	
		admitted to community hospitals instead of regional	
		center).	
		Consider heavy workload staffing (i.e. physicians, Nurse	
		Practitioner (NP), nurses, HCA, clerks and consult with	
		manager/on call for approval).	
		• Evening, Night, Weekends – notify Regional Acute On-Call	
		Manager.	
		Consider implementing Nurse Managed Care.	

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 7 of 22

		If community hospitals have empty beds, transfer low
		acuity patients directly from ED to be admitted in Acute
		Community Hospital - even if they are a local patient.
		Implement Nurse Managed Care.
	Level 0	Daily site rounding to set/monitor expected date of
		discharge with CRN and physician.
		In collaboration with Health Information System (HIS)
		actively monitor/report beds in operation and closed
		beds.
		 Monitor capacity and identify flow risks.
		 Monitor patients' length of stay and hold regular case
		planning/rounds to ensure monitoring and discharge
		planning occur.
		 ED and direct admissions of lower acuity are safely
		directed to community, primary care or lower acuity
		facility (including TCU), active presence of home care
Manager, Health		coordinators in ED to facilitate discharge to community.
Services		 Interdisciplinary teams actively collaborate with
		community partners on discharge planning and solutions
		for patients deemed to be ALC.
		 Promote PCH paneling from home rather than hospital
		whenever possible and safe to do so.
		 Bed management – units/sites are actively reporting bed
		census in EPR including beds in operation, bed closures,
		ED closures and ventilated, transferrable patients in
		critical care, ALC designations, occupancy and patient
		discharges.
		 Sites with available beds may not delay or refuse
		acceptance of patients when safe patient care can be
		provided at a facility with capacity.
		 Where patients or families have concerns re:
		transfer/repatriation, work with patient flow, CRN,
		director and physicians to problem solve.
		 Participate in daily site and/or regional 0930 bed call.
		Identify site risks, challenges. Input site bed numbers on
		Regional Bed Call Template via Teams Channel.
		 Ensure weekly admission and discharge rounds are set up
		for each unit.
		 Ensure actions outlined in capacity plan are being
		followed.
		expected and potential surgical post-operative
		admissions.
		Follow <u>CLI.4110.PL.008</u> Interim Placement for Patients Waiting Decemped Care Llonge Placement
	Laurel 4	Waiting Personal Care Home Placement.
	Level 1	
	Level 2	Off service patients to utilize all available spaces.

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 9 of 22

		• ED Specific - Consider implementing Nurse Managed Care.
	Level 4	All available spaces are being used and additional bed
		spaces are made available.
		Follow Code Orange if applicable.
		Communicate to inpatient unit teams that site is Alert
		Level 4.
		Notify site director/SLT for consultation and further
		guidance.
		Once notified, support teams to accept admissions out of
		ED as assigned.
		Schedule additional urgent bed huddle to reassess site
		capacity and make plans to get through evening/night.
		Communicate plans to all applicable units at afternoon huddle.
		ED Specific - initiate Nurse Managed Care.
<u> </u>	Level 0	Surgical slates at baseline are scheduled so bed and slate
		capacity is maintained to address anticipated emergency
		case volume.
		Scheduled surgeries are slated according to priority and
		time to which surgical care needs to be provided (cases
		over target date will be scheduled first).
		Scheduled surgical slating are reflective of the capacity for
		surgical in-patient bed base.
0.		Scheduled surgical slates take into consideration the
OR Manager		health human resource capacity of the site.
		Report any cancellations or interruptions in surgical
		service to Regional Patient Flow Coordinator.
		All elective slate cases are prepped in Same Day Surgery.
	Level 1	Attend site and or regional huddles where applicable.
	Level 2	
		the settle benetice with Compiler 1 Attending and (see Chief of
	Level 3	In collaboration with Surgical Attending and/or Chief of Surgery, review of scheduled surgical assoc by priority and
		Surgery, review of scheduled surgical cases by priority and target date, consider rescheduling cases that are within
		target, non-cancerous and priority 3, 4, 5 which require an
		in-patient bed to accommodate emergency cases or other
		system demand.
		Consult site director. Consultation with SLT as needed.
	Level 4	• Scheduled surgical slates which are priority 3, 4, 5 and
		non-cancer are cancelled to accommodate emergency
		cases or other system demands and notify Regional
		Patient Flow Coordinator.
		 Notify staff that they may be reassigned to other
		departments.
		Reassign staff to other departments as feasible/required.
		Inform SLT.
		Bed Utilization

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 10 of 22

	Lauric	A factor and the solution of the state
	Level 0	Monitor capacity and identify flow risks.
		Monitor patients' LOS and hold regular case
		planning/rounds to ensure monitoring and discharge
		planning occur.
		 ED and direct admissions of lower acuity are safely
		directed to community, primary care or lower acuity
		facility (including TCU), active presence of home care
Site Bed		coordinators in ED to facilitate discharge to community.
Coordinator		 Interdisciplinary teams actively collaborate with
		community partners on discharge planning and solutions
		for patients deemed to be ALC.
		 Promote PCH paneling form home rather than hospital
		whenever possible and safe to do so.
		 Bed management – units/sites are actively reporting bed
		census in EPR including beds in operation, bed closures,
		ED closures and ventilated, transferrable patients in
		critical care, ALC designations, occupancy and patient
		discharges.
		 Participate in facility huddle.
		 Ensure ALC clients have discharge plan and are coded
		correctly/reported in daily bed and Provincial Capacity
		Dashboard.
		 Attend weekly Admission and Discharge rounds on all inpatient units call.
		 Communicate discharge barriers to appropriate team members
	Level 1	Accept repatriations appropriate for site.
	Level 2	 Prioritize patients ready for discharge to facilitate their
		discharge from site.
		Consider delaying repatriations.
		 Confirm that hospital capacity has been communicated to
		physician groups for support to prioritize discharging
		patients.
		Consider afternoon daily huddle.
	Level 3	Patients are admitted into available beds beyond existing
		admission criteria as long as their clinical needs can be
		met.
		Delay repatriations.
		Afternoon daily huddle.
	Level 4	Follow Code Orange protocol.
		 All available spaces are being used and additional bed
		spaces are made available.
		·
		 No repatriations, may require transfer out of patients to other sites
	Lovel C	other sites.
	Level 0	Monitor capacity and identify flow risks.
		Lead daily regional flow call that includes on an 'ad hoc'
1		basis primary and community stakeholders which reviews

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 11 of 22

Regional Patient Flow Coordinator	•	planning/rounds to ensure monitoring and discharge planning occur. ED and direct admissions of lower acuity are safely directed to community, primary care or lower acuity facility (including TCU), active presence of home care coordinators in ED to facilitate discharge to community. Bed management – units/sites are actively reporting bed census in EPR including beds in operation, bed closures, ED closures and ventilated, transferrable patients in critical care, ALC designations, occupancy and patient discharges. Review repatriation requests and refer to appropriate site contact between regional centers and community hospitals to support patient movement that allows access/flow. Sites with available beds may not delay or refuse acceptance of patients when safe patient care can be provided at a facility with capacity. Where patients or families have concerns re: transfer/repatriation, work with CRN, site manager, director and physicians to problem solve. Monitor risks across the Service Delivery Organization (SDO) related to capacity and disruptions.
	Level 1 Level 2	Senior Clinical Leads work to remove barriers to flow (i.e. authorization of reasonable expenses such as equipment, local private transport).
	Level 3	 Patients are admitted into available beds beyond existing admission criteria as long as their clinical needs can be met. Escalate to appropriate community program leadership to seek approval regarding options for patients waiting in acute care who are designated as ALC for access to options which include: Providing enhanced home care support for patients that can be discharged early. Temporary ALC placement. Emergency housing/rent aid.

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 12 of 22

		 Authorization to purchase, reimburse or provide
		compensation to third party or family as temporary
		option (i.e. Allied Health Services).
		Consider deferring repatriations and send to alternative
		site.
	Level 4	In partnership with PCH operators and continuing care
		facility operators consider opening additional spaces in
		TCU or PCH facilities.
		Defer repatriation and refer to appropriate alternative
		site.
		Medical Team
	Level 0	 Daily site rounds to set/monitor expected date of
		discharge with CRN and manager.
		 Monitor capacity and identify flow risks.
		 Monitor patients' LOS and hold regular case
		planning/rounds to ensure monitoring and discharge
		planning occur.
		 Where patients or families have concerns re:
		transfer/repatriation, work with patient flow, CRN, site
		manager, and director to problem solve.
		 With team, establish goals of care and EDDs.
		 Daily review of patient's progress towards discharge
		including list of Awaiting Placement patients that is
		discussed at weekly rounds.
		 Identify complex discharges and work with the
		interdisciplinary team to address barriers to discharge.
Physician		 Ensure patient under correct service (transfer care to
Filysiciali		different service as needed).
		Write anticipatory discharge orders, including required
		prescriptions, medication reconciliation, consults/referrals
		and letters.
		Support discharges occurring prior to 1100.
		Support acceptance of repatriation/admissions promptly
		to support goal of admission from ED/neighboring
		community.
	Level 1	Escalate barriers to acceptance of
		admissions/repatriations to unit manager/site director.
	Level 2	Senior Clinical Leads and Chief Medical Officer work to
		remove barriers to flow (i.e. authorization of reasonable
		expenses such as equipment, local private transport).
		Work with interdisciplinary team to consider discharges
		and non-hospital environment of care.
		Consider Awaiting Placements, and Transfer to TCU.
		Weekend alert to Home Care regarding possible weekend
		discharges.
		• "Run the board" of ED and inpatients to see if discharge
		could be considered for each patient.
		Identify patient for early discharge with ED reassessment.

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 13 of 22

		Provide Doc-to-Doc for transferred patients. Make
		transfer issue list for on-call physicians who may transfer
		patient.
	Level 3	 Patients are admitted into available beds beyond existing
	Levers	
		admission criteria as long as their clinical needs can be met.
		 If weekday, Chief of Staff to communicate with Medical Staff regarding capacity level at site and strategies on
		Staff regarding capacity level at site and strategize on
		options to discharge patients or send to other sites.
		Consider calling in additional Prescribers to assist with
		overflow.
		Collaborate with CRN to review Provincial Capacity
		Management Dashboard to identify facilities with capacity
		to accept transfers. Identify priority patients to be
		transferred (nurse to get family discussion underway), if
		needed notify family and do transfers to accepting
		physicians.
		 Discuss with team about curtailing services (ED for
		overcapacity bed reasons).
		ED - Consider implementing Nurse Managed Care.
	Level 4	Site physician and Chief Medical Officer: After all other
		options have been exhausted, sites in Level 4 with
		incoming repatriation/low acuity transfer from sites also
		in Level 4, redirect all requests for clinical service that can
		be provided at alternative sites in any health regions with
		available capacity within 200kms from home community.
		Communication with patient and family and assessment of
		social supports must be considered
		Follow Code Orange Protocol if appropriate.
		ED - Consider implementing Nurse Managed Care
		Acute Care Leadership
	Level 0	Identify and escalate imminent system impacts to
		Regional Patient Flow Coordinator.
		Where patients or families have concerns re:
		transfer/repatriations, work with patient flow, site
		manager, CRN and physicians to problem solve.
		 Attend/lead daily site briefing/huddle to help expedite
		flow coordination and remove barriers to flow.
		 Ensure daily access and flow activities are occurring as per
		standard work.
	Level 1	
	Level 2	Senior Clinical Leads work to remove barriers to flow (i.e.
		authorization of reasonable expenses such as equipment,
Director, Health		local private transport, staffing).
Service		
		potential available beds/staff.
		Review repatriation requests and support referral to
		appropriate site.

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 14 of 22

	Liaise between Regional Centers and Acute Community
	Hospitals to support patient flow.
	Contact SLT IF assistance required.
	Contact Regional Lead - Acute Care & Chief Nursing Officer
	on Weekdays 0730-1700. If after hours, contact SLT On-
	Call for assistance.
Level 3	 Review of scheduled surgical cases by priority and target
	date, consider rescheduling cases that are within target,
	non-cancerous and priority 3, 4, 5 which require an in-
	patient bed to accommodate emergency cases or other
	system demand.
	 Redirect any available regional staff to high need areas for
	support (note within Collective Agreement).
	 Patients are admitted into available beds beyond existing
	admission criteria as long as their clinical needs can be
	met.
	Escalate the situation to Regional Lead - Acute Care &
	Chief Nursing Officer. Notify (call/email) Regional Lead -
	Acute Care & Chief Nursing Officer on Weekdays 0730-
	1700h. If SLT assistance is needed after hours, contact SLT
	On-Call as needed with implementation of Over Capacity
	Protocol (i.e. approval of additional staffing/medical
	resources, connecting with ERS for transport issues,
	connecting with site leadership/manager On-Call).
	Attend regional bed call and initiate additional site
	huddles as required.
Level 4	 All available spaces are being used and beds are being
	stood up where possible.
	• Scheduled surgical slates which are priority 3, 4, 5 and
	non-cancer are cancelled to accommodate emergency
	cases or other system demands and notify Regional
	Patient Flow Coordinator.
	In partnership with PCH operators and continuing care
	facility operators consider opening additional spaces in
	TCU or PCH facilities.
	After all other options have been exhausted, sites in Level
	4 with incoming repatriation/low acuity transfer from sites
	also in Level 4, redirect all requests for clinical service that
	can be provided at alternative sites in any health regions
	with available capacity within 200kms from home
	community.
	 Communication with patient and family and assessment of assist summarized
	social supports are considered.
	Follow Code Orange if applicable.
	Facilitate additional urgent site huddle bed call to reassess
	site capacity and make plans to get through evening/night
	shift.

	Level 2	
	Level 3	 Discussions and planning to balance needs of community urgent and palliative clients with the needs of the clients' requiring discharge, to mitigate presentation to acute care.
	Level 4	 Site specific huddles to review clients awaiting services and assignment of resources. Discussion and planning to balance needs of community urgent and palliative clients with the needs of clients' requiring discharge, to mitigate presentation to acute care.
Hospital Based Home Care Case Coordinator/ Case Coordinators where no HBCC present	Level 0	 Receives new referrals (<u>CLI.5410.PL.003.FORM.01</u> and <u>CLI.5410.PL.003.FORM.02</u>). Receives communication re: existing clients who have been admitted to hospital (Facility/Home Care Coordinator Communication Tool). Attends rounds on each inpatient unit. Plans for client discharge, including client assessment; discussion with caregiver; planning with health care team for necessary supplies and equipment. Reviews options for home care services, including Self and Family Managed Care. Collaborate with acute care teams to identify barriers to discharge and explore solutions. Prioritizes work based on patients that could be discharged same day/next day.
	Level 1	
	Level 2	Prioritizes work based on hospital discharges 24 hours out.
	Level 3	 Prioritizes work based on hospital discharges 48 hours out to determine if they can be expedited. Reviews existing home care clients to see if possible to discharge patient home with community/family supports while they await home care supports. Reviews barriers to discharge to determine if there is an interim solution (i.e. supplies, equipment, agency) Anticipate escalation from Acute Care team partners to seek approval regarding options for patients waiting in acute care or transitional care beds who are designated as ALC for access to options could include: Providing enhanced home care support for patients that can be safely be discharged early.
	Level 4	 Prioritizes work based on hospital discharges 72 hours out to determine if they can be expedited. Reviews existing home care clients to see if possible to discharge patient home with community/family supports while they await home care supports.

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 18 of 22

	Reviews barriers to discharge to determine if there is an
	interim solution (i.e. supplies, equipment, agency).
	• Reviews clients who are ALC waiting placement to bring
	forward for discussion if any of them can be discharged
	and wait at home with an increase in supports.
Level 0	Support the Case Coordinators and Resource Coordinators
	with discharge planning as required.
Level 1	
Level 2	
Level 3	Explore options to expedite discharges, inclusive of
	staffing resources and reprioritization of clients/work.
Level 4	Explore options to expedite discharges, inclusive of
	staffing resources, reprioritization of clients/work, and SLT
	direction.
Level 0	Continue usual practice of filling transitional care beds
	according to prioritized need:
	1. Community urgent or palliative requests.
	2. Repatriation requests that are appropriate for
	sub - acute care.
	3. ALC patients who are waiting placement in acute
	care.
Level 1	 Continue usual practice of filling transitional care beds
	according to prioritized need:
	 Community urgent or palliative requests.
	2. Repatriation requests that are appropriate for
	sub - acute care.
	3. ALC patients who are waiting placement in acute
Laural 2	care.
Level 2	 Prioritize urgent admission of ALC patients to available
	TCU beds to free up acute care bed capacity.
	 Work with PCHs to review prioritization of admission of patients from acute care, balancing community
	urgent/palliative needs as well to reduce the number of
	individuals that may present to ED.
Lovel 3	Level 1 actions continue plus:
Levers	Work with Regional Bed Flow Coordinator to identify
	patients that are appropriate for expedited PCH/TCU
	admission including interim placement.
	 Disseminate potential patient information to available
	sites for review.
	Once PCH/TCU has been identified for admission work
	with sites to help facilitate communication of required
	information.
	Communicate with Director, Health Services/PCH
	Managers over capacity status.
	Compile list of closed PCH/TC beds/units from the sites
	Level 1 Level 2 Level 3 Level 4

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 19 of 22

	Level 4	evel 1 and 2 actions continue plus:	
		 Review with Regional Bed Flow Coordinator individuals that are appropriate to be placed in identified TC treatment rooms. Ideally, patients can ambulate independently (with or without aide) in order to facilitate 	
		toileting.	
	Level 0	 Work in collaboration with LTC Access Coordinator to admit into available TCU/PCH per usual practice. Those PCHs who offer respite services can continue as per usual schedule. 	
	Level 1		
	Level 2	 Work with LTC Access Coordinator to review prioritization of admission of patients from acute care, balancing community urgent/palliative needs as well to reduce the number of individuals that may present to ED. 	
TCU/PCH Sites	Level 3	the need to expedite admissions.	
		in additional staffing to expedite terminal cleans, etc. to turn beds around quickly.	
		 to support the expedited admission process. PCHs who offer respite postpone scheduled respite to admit temporary ALC patient on respite until acute care capacity stabilizes, at which time the ALC patient are returned to acute care if a PCH bed not available. Provide LTC Access Coordinator with number of any PCH/TC beds/units that are currently closed due to 	
	Level 4	 staffing. PCHs/TCs directed to admit into all available beds immediately from ALC patients waiting placement in acute care. Expedited admission process is followed. Review with Director, Health Services any current respite admissions and determine if admission can be ended 	
		 early. Determine staffing needs for any closed PCH beds/units and review with Director, Health Service to determine if additional beds can be opened with increased staffing. 	
		 Work with Human Resources to review redeployment as needed to open closed beds/consideration to liaise with agency staff as well to support staffing for opening units. Review/Consider admitting into TC treatment rooms if available safety resources in place in the rooms (i.e. call bell, and patient is identified as short stay admission). 	

Capacity Management Protocol Site Specific Plan – BTHC CLI.4110.PL.030.FORM.02 November 2024 Page 20 of 22

		Boviou any modical TCL patients that are sweiting convice
		 Review any medical TCU patients that are awaiting service initiation. Work with Home care/Palliative Care to see if initiation of services can be expedited and discharge can
		occur.
	Level 0	PCH and TCU facilities must be 'bed ready',
		meaning they are actively prioritizing, triaging
		and pulling patients to beds where available.
		Support the LTC Access Coordinator with site discussions
		as needed.
	Level 1	Support the LTC Access Coordinator with site discussions
		as needed.
		Ensuring continuation of the offering of vaccinations at
		PCHs/TCUs.
PCH Director/	Level 2	Support the LTC Access Coordinator with site discussions
Manager		as needed.
		Review list of closed TCU/PCH beds/units received from
		LTC Access Coordinator with site leadership closely to
		determine if any can be opened to assist.
		Communication to Home Care and LTC sites that respite
		admissions are halted until directed otherwise.
		Communicate to Home Care that community urgent
		admissions are paused until over capacity status
	1	decreases.
	Level 3	Anticipate the need to partner with PCH and TCU teams for passible energies of additional energy
		for possible opening of additional spaces.
		 Support the LTC Access Coordinator with site discussions as needed.
		 Work with LTC Access Coordinator to review prioritization
		of admission of patients from acute care, balancing
		community urgent/palliative needs as well to reduce the
		number of individuals that may present to ED.
	Level 4	 In partnership with PCH operators and continuing care
		facility operators consider opening additional spaces in
		TCU or PCH facilities.
		• Support the LTC Access Coordinator with site discussions
		as needed.
		 Meeting with LTC Access Coordinator, Directors East/West
		and LTC admin to strategize bed flow options.
		• Support sites managers in discussions with family's and
		residents re: ending respite admissions early.
		Support TC sites in communicating with Home
		Care/Palliative Care to expedite discharge of
		medical/palliative patients to the community that are
		awaiting the set up of services.
