

## Crying and Colic in the Breastfed Baby Clinical Practice Tool

### **Maternal Assessment**

#### History:

- Knowledge of normal infant crying behaviour
- Knowledge of normal breastfeeding behaviours
- Tobacco usage
- Medications
- Maternal allergies

#### Observations:

- Breastfeeding latch and position
- Feeding history: Time required to complete feeding
- Offer one or both breasts at each feed
- If baby unlatches as the "let down" happens, milk may spray from the nipple
- Milk may leak from the other breast as you breastfeed
- Milk may be very easy to express
- Recurrent plugged ducts and mastitis

#### **Infant Assessment**

# Observation and Assessment:

- Fussy while feeding, this can be described as baby pulling away while feeding, arching back or going on and off while feeding
- Gulping at the breast
- Cries more than three hours a day
- The cries are inconsolable
- Vomits/regurgitates after most feeds
- Fusses while feeding and often is sputtering and having difficulty keeping up with the let-down
- Gaining weight rapidly
- Several bowel movements per day which can be very loose and "green"
- Fussing when in positions that sit baby forward, push legs up against tummy or on back
- Salivating
- Congested or rumbly breathing
- Pulling off the breast because feeding appears to cause pain
