

Infection Control Preventive Measures Plan

Infection Control Preventive Measures Plan must include:

- List of equipment to be utilized to provide negative pressure within areas of construction.
- Location of exhaust penetration to the exterior and routing of ductwork
- Identification of systems which require isolation prior to commencement of construction or modification.
- Location of temporary barriers and partitions.
- Location of proposed interior routing of new building products and waste materials.
- Location of walk-off mats.
- Location of manometer.

For example, see below:
